Profile

DevOps Engineer specialized in cloud infrastructure management, CI/CD pipeline automation, and enterprise-scale system reliability. I architect and maintain scalable solutions across multi-cloud environments while ensuring optimal performance, security, and compliance.

Experience

DEVOPS ENGINEER | QLU.ai | JULY 2024 – PRESENT

- Optimized CI/CD pipelines (**Jenkins, GitHub Actions, Cloud Build**), reducing deployment time by **40%** and enhancing reliability and security. Implemented best practices including multi-stage docker builds, caching, Poetry for faster dependency resolution, smart triggering via webhooks, secret management and real time success/failure notifications.
- Independently managed multi-cloud infrastructure across **GCP** and **Azure** for **10+ production grade products**, maintaining **99.99% uptime**.
- Established isolated environments (Production, Staging, Development) to enable safer rollouts, comprehensive testing, improved product reliability and faster release cycles.
- Led **zero-downtime** database migrations of Postgres DBs from GCE to Cloud SQL and between Cloud SQL instances via Google Cloud Storage. Integrated **pgBouncer** for production ready connection pooling, improving availability and performance.
- Deployed and Scaled **Elasticsearch clusters**, optimizing heap management, GC tuning, indexing, sharding. Improved query performance by **50%**. Performed load testing using **JMeter** and **K6** for high traffic readiness.
- **Provisioned LiveKit infrastructure** on **GCE (Docker)** and **GKE (AI agents)**, configuring high availability with **Horizontal Pod Autoscaling (HPA)**. Employed best practices with **ConfigMaps and Secrets** for secure configuration.
- Implemented security best practices including least privilege access, role-based permissions, **zero-trust networking (Twingate)**, **SSL/TLS** encryption, **Cloud Armor**, and **reCAPTCHA**, reducing unauthorized access risk.
- Spearheaded **SOC 2 Type II compliance** via Sprinto, completing **2 successful audits** covering confidentiality, availability, processing integrity, privacy, and security controls.
- Achieved **CASA Tier 2 verification** for sensitive Google APIs, strengthening cloud and application security. **Led vendor assessment and negotiation** with Google-authorized labs, securing a cost-effective testing agreement and ensuring a seamless compliance process.
- Integrated **Single Sign-On (SSO)** and validated cross-platform integrations (GCP OAuth, Microsoft Partner domains) for secure, seamless user access.
- Deployed diverse production services including **QDrant, Redis, CrateDB, Manticore DB, and MQTT (Mosquitto)** on GCE to deliver cost-efficient, high-performance solutions.
- **Reduced cloud costs by 30%** through resource optimization, efficient log ingestion, backup/snapshot pruning, and rightsizing compute/storage resources.
- Ensured production readiness via **Cloud Monitoring, Slack-based alerts**, and **cron jobs** for secret expiry that helped in improving incident response and reliability.
- Configured **DNS and load balancing** for frontend apps (Vercel, Firebase) and backend services (Cloud Run, Compute Engine), ensuring seamless user access and scalability.

WEB INTERN | ASKARI BANK LIMITED (ITG) | JULY 2023 – SEPTEMBER 2023

- Gained hands-on experience in **ASP.NET** and **C#**, developing internal banking applications and enhancing system functionality.
- Built and customized reports using **Crystal Reports** and **RDLC**, streamlining data presentation for banking operations.
- Applied **multithreading** techniques to improve application performance and responsiveness.
- Gained exposure to full **Software Development Life Cycle (SDLC)** and applied industry-standard design patterns to build scalable code.
- Performed automated testing using **Selenium**, improving reliability and reducing manual QA time.

Projects

DOCTOR APPOINTMENT SYSTEM (2023)

A Dockerized microservices with seamlessly integrated CI/CD pipelines and optimized Kubernetes Deployments and Services.

Tech Stack: **Docker, Kubernetes, GitHub, CI/CD Pipelines, GitHub Actions**

MICROSERVICES AND CI/CD PIPELINE BUILDER (2023)

Converted a monolithic application to a Micro service by planning and building CI/CD pipeline with AWS leveraging compute resources, databases, networking resources and cloud IDE and enabled logging with AWS CloudWatch.

AWS Services used: **EC2, ECS(Fargate), ECR, RDS, CodeCommit, CodePipeline, CodeBuild, CodeDeploy, IAM, ELB, VPC, CloudWatch, AWS Cloud9.**

Education

BACHELOR OF SCIENCE IN COMPUTER SCIENCE (NUCES - FAST) JUNE 2024

National University of Computing and Emerging Sciences, Islamabad

(CGPA: 3.54)

Dean's List: Fall 2022, Spring 2023, Fall 2023.

Certifications

AWS ACADEMY CLOUD SECURITY FOUNDATIONS - AWS

[certificate](#)

Gained foundational knowledge of cloud security concepts, including AWS shared responsibility model, IAM policies, encryption, network security, and compliance. Built a strong understanding of how to secure AWS cloud environments.

AWS ACADEMY CLOUD SECURITY BUILDER - AWS

[certificate](#)

Deepened knowledge of cloud security implementation using AWS services. Covered topics such as incident response, data protection strategies, security logging, and automated threat detection with services like AWS WAF, GuardDuty, and CloudTrail.

LINUX: INTRODUCTION TO SHELL SCRIPTING FOR DEVOPS - COURSERA

[certificate](#)

Learned core shell scripting concepts in a Linux environment for DevOps automation. Developed scripts for file handling, process management, user administration, and cron jobs to streamline system administration tasks.

DEVOPS ESSENTIALS by IBM - COURSERA

[certificate](#)

This certification provided me with essential knowledge about DevOps. I came to know about some technical terms such as Minimum Viable Product (MVP), Behavior-Driven Development (BDD), Test-Driven Development (TDD) and Gherkin syntax for acceptance criteria.

FOUNDATIONS OF CYBERSECURITY - GOOGLE

[certificate](#)

Acquired a foundational understanding of cybersecurity, including risk assessment, threat modeling, types of cyber attacks, and principles of defense-in-depth. Learned about roles within cybersecurity and basic protection strategies.

FOUNDATIONS OF PROJECT MANAGEMENT BY GOOGLE - COURSERA

[certificate](#)

Gained practical knowledge of project management frameworks and methodologies. Learned the core responsibilities of a Project Manager, stakeholder communication, project lifecycle, and tools for delivering successful outcomes.
